### OPIS PRODUKTU

This set of four echo-cancelling wired microphones assures premium audio performance when used with the Sony PCS-XG80 and PCS-XA80 video conferencing systems.

Each mono microphone's unidirectional pick-up response captures crisp, clear speech from individual conference participants in a boardroom or meeting space.

For best results, it's recommended to locate meeting participants approximately 0.5-1.5m from the microphone. Acceptable audio quality is also obtained with speakers at a distance of up to 2m.

Integrated echo cancelling boosts intelligibility of speech for more productive conferences where every participant is heard clearly and distinctly. Up to 80 microphones (20x PCSA-A7P4) can be cascaded to cover the large-scale conferences with a large number of participants seated in a meeting room, conference call or auditorium.
